Copar Scoreboard

Copar's Scoreboard production displays help promote productivity by improving operator and supervisor awareness. The large format displays can be connected to both new and existing Copar control systems, or may also be installed as a stand-alone unit.

Stand-alone systems show current/average speed, current/total downtime, uptime %, and other essential production information. When connected to full Copar systems, the display adds current grade information, order lineal/time remaining, square footage, color-coded production targets, shear cut counts, and on-screen machine status messaging. Screens may also be setup to highlight monthly shift rankings if Copar's Scorecard software has been installed.

- The dual-sided 98", Ultra-Large HDTVs are easy to read from across the plant floor.
- The metal enclosure construction provides a professional, substantial finished look.
- The enclosure's hooded design helps keep dust off the screens while reducing glare from overhead lighting, for bright, crisp text.
- The video server interface and HDMI cables hidden from view for a clean appearance.
- The information displayed may be changed and customized according to plant requirements.
- Older, smaller 50" displays may be easily replaced.

Enclosure Overall Dimension: 90" x 67" x 50" (W x D x H)
