

Thermal Imaging™

Proactive Quality Control

Uniform paper temperature and moisture levels are essential for producing high-quality corrugated sheets. Unfortunately, the human eye can't detect hidden variations ingrained in the paper until an obvious defect is produced.

CoparSolutions' Thermal Imaging measures IR radiation across the web to identify and display temperature inconsistencies before they become downstream issues. Real-time graphic depiction allows operators to quickly recognize and correct potential problems.

- ◆ Detect and correct inconsistencies before they become issues
- ◆ Consistently produce high-quality board
- ◆ Dramatically reduce waste
- ◆ Store production data for review and troubleshooting (optional)
- ◆ Increase corrugator profitability

COPAR SOLUTIONS™

INNOVATIVE SOLUTIONS FOR TOTAL CORRUGATOR CONTROL
